EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John Lister on 01/14/2005.

The application has been amended as follows:
cancel claims 4-6 and 20-24.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose or suggest the claimed apparatus as amended and supported by the reasons provided in the remarks of the amendment filed on 12/16/2004. In particular, the prior art of record fails to disclose the claimed blanket-packaging machine comprising in combination vertical insulation blanket moving means for successively elevating groupings of one or more insulation blankets (Fig. 3; bats 202) at a time in a vertical direction from the blanket loading station 24 up through the transfer station 26 into compression station 28 while simultaneously permitting insulation blankets 202 to be fed into the loading station 24.

Regarding claim 7: the prior art of record fails to disclose the claimed blanket-packaging machine comprising in combination the vertical batt moving means successively moving batts from the batt loading station (Fig. 3; loading station 24) into the transfer and batt stacking station 26 until a first selected number of batts 202 that is one less than a second selected number of

batts to be formed into the batt stack 204 in the transfer and stacking station 26; the vertical batt moving means being deactivated once the first selected number of batts has been moved into the transfer and stacking station 26; the vertical batt stack moving means being activated to move a single batt 202 from the batt loading station into the transfer and batt stacking station completing the formation of the batt stack 204 in the transfer and stacking station 26 and move the batt stack 204 into the batt compression station 28 when the vertical batt moving means is deactivated; and the vertical batt moving means being reactivated to again successively move batts from the batt loading station 24 into the transfer and batt stacking station 26 once the vertical batt moving means has moved the single batt into the transfer and stacking station from the batt loading station to complete the formation of the batt stack in the transfer and stacking station, see Fig. 3. In other words feeding the batt stack 204 from the transfer and stacking station 26 to the compression station 28 at the mean while moving batt 202 from the loading station 24 to the stacking station 26.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sameh H. Tawfik whose telephone number is 571-272-4470. The examiner can normally be reached on Tuesday - Friday from 8:00 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on 571-272-4467. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
